

PRODUCT SPECIFICATION SHEET

Alkaline Saline Peptone Water (DM009)

Intended Use

Alkaline peptone water is used for the enrichment of vibrio species from infectious material, food, water and other material.

Product Summary and Explanation

Alkaline peptone water is used for the enrichment of vibrio cholera and vibrio species from food, water feces and clinical studies. This medium has been recommended by OMS, APHA⁽¹⁾ and various authors to increase the recovery of vibrio species in fecal material and other samples. Clinical materials containing small numbers of Vibrio should be inoculated into an enrichment medium prior to plating onto a selective medium, such as TCBS Agar (DM253). Alkaline Peptone Water is a suitable enrichment broth for this purpose⁽¹⁻³⁾. The relatively high pH of the medium (approximately 8.4) provides a favourable environment for the growth of *Vibrio*'s. This medium is recommended by APHA⁽⁴⁾ for enrichment of *Vibrio* species from seafood, infectious materials and other clinical specimens such as faeces.⁽⁵⁾

Principles of the Procedure

Alkaline peptone water is pre-enrichment for vibrio species. Vibrio should be inoculated into an enrichment medium prior to plating onto a selective medium. Alkaline peptone water is a suitable enrichment broth for the enrichment of vibrio species.⁽²⁻⁴⁾ High pH of the medium (8.4) provides a suitable environment for the growth of vibrio's. Peptic digest of animal tissue provides nitrogenous, carbonaceous, and other important nutrients. Sodium chloride maintains osmotic equilibrium. The high pH, promotes the growth of vibrio species and suppresses the growth of microbial flora.

Formula / Liter

Ingredients	Gms / Litre
Tryptic digest of Casein	10.00
Sodium chloride	10.00
Final pH: 8.4 ± 0.2 at 25°C	
Formula may be adjusted and/or supplemented as required to meet performance specifications	

Precautions

1. For Laboratory Use only.
2. IRRITANT. Irritating to eyes, respiratory system, and skin.

Directions

1. Suspend 20 g of the medium in one liter of distilled water.
2. Heat if necessary, to dissolve the medium completely. Distribute into tubes as desired.
3. Autoclave at 121°C , 15 psi pressure, for 15 minutes / validated cycle.

Quality Control Specifications

Dehydrated Appearance	Cream to yellow colored, homogeneous, free flowing powder
Solution	2.0% Solution in Distilled or deionized water is soluble on boiling, Light yellow colored, and very slightly to slightly opalescent.
Prepared Medium	Light yellow colored clear solution without any precipitate
Reaction of 2.0% Solution	pH 8.4 ± 0.2 at 25°C
Gel Strength	Not Applicable

Expected Cultural Response: Cultural response on Alkaline Peptone Water observed after incubation at 35-37°C for 18-24 hours.

PRODUCT SPECIFICATION SHEET

Sr. No.	Organisms	Results to be achieved	
		Inoculum (CFU)	Growth
1.	<i>Vibrio cholerae</i> ATCC 15748	50 -100	luxuriant
2.	<i>Vibrio parahaemolyticus</i> ATCC 17802	50 -100	luxuriant

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure

Add 10 grams of seafood to 90 ml of Alkaline Peptone Water and incubate for upto 18-20 hours at 37°C.

Results

After incubation record growth of organism as follows:

1. Growth in tubes is indicated by turbidity compared to an un-inoculated tube (control).
2. Growth from the enrichment broth is used for plating on selective media.
3. Prolonged incubation will result in growth of the suppressed contaminating organisms to develop ⁽⁶⁾.

Storage

Store the sealed bottle containing the dehydrated medium at 10 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light.

Expiration

Refer to the expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if the appearance has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

Limitations of the Procedure

1. For identification, organisms must be in pure culture. Morphological, biochemical and/or serological tests should be performed for final identification.
2. Consult appropriate texts for detailed information and recommended procedures.

Packaging

Product Name : Alkaline peptone water.

Product Code : DM009

Available Pack sizes : 100gm / 500gm
