

PRODUCT SPECIFICATION SHEET

Buffered Sodium Chloride-Peptone Solution pH 7.0 (DM1041I)

Intended Use

Buffered Sodium Chloride-Peptone Solution pH 7.0 (DM1041I) is recommended as a diluent for performing microbial limit testing, in compliance with IP.

Product Summary and Explanation

Buffered Sodium Chloride-Peptone Solution pH 7.0 is recommended for preparation of stable test strain suspensions of organisms for testing growth promoting and inhibitory properties of media when examining non-sterile pharmaceutical products for specified microorganisms. The composition of this medium is as per IP⁽⁵⁾ and in accordance with the harmonized methodology of USP/BP/EP/JP/IP.^(1,2,3,4,5) This fluid provides osmotic stability, a stable pH value and maintains the viability of microorganisms during preparation of samples. The standardized stable suspensions are used so that the suitability of this test to detect microorganism in presence of product can be established. Non-fatty products insoluble in water and water-soluble products are diluted/dissolved using this solution. Surface-active ingredients or inactivators of antimicrobial agents such as (but not limited to) polysorbate 80 may be added to Buffered Sodium Chloride-Peptone Solution pH 7.0.

Principles of the Procedure

Buffered Sodium Chloride-Peptone Solution pH 7.0 contains peptone (meat or casein) which provides nutrient source and maintains the cell viability. Phosphates are the buffering agents in the solution. Sodium chloride provides osmotic stability and cell integrity. Polysorbates reduce surface tension and also inactivate phenolic compound, if present in the test sample. Low peptone content provides basic nutrients such as amino acids to maintain organism viability.

Formula / Liter

Ingredients	Gms / Liter
Potassium dihydrogen phosphate	3.60
Disodium hydrogen phosphate dihydrate	7.20
Sodium chloride	4.30
Peptone (meat or casein)	1.00
Final pH: 7.0 at 25°C	
Formula may be adjusted and/or supplemented as required to meet performance specifications	

Precautions

1. For Laboratory Use only.
2. IRRITANT. Irritating to eyes, respiratory system, and skin.

Directions

1. Suspend 14.64 grams of the medium in one liter of purified/distilled water.
2. Heat if necessary to dissolve the medium completely.
3. Autoclave at 15 lbs pressure 121°C for 15 minutes or as per validated cycle.

Quality Control Specifications

Dehydrated Appearance	White to cream homogeneous free flowing powder
Prepared Medium	Colourless clear solution without any precipitate
Reaction of % Solution	Not Applicable
Gel Strength	Not Applicable

PRODUCT SPECIFICATION SHEET

Growth Promotion Test

Growth Promotion is carried out in accordance with the harmonized method of IP.

Expected Cultural Response: Cultural characteristics observed after recovery on Soybean Casein Digest Agar after an incubation at 30-35°C for 18-24 hours for bacteria and Sabouraud Dextrose Agar at 30-35°C for 24-48 hours.

Sr. No.	Organisms	Results to be achieved

-----	-----------------------------------	---------	-----------------------------	-----------------------------	---

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure

Preparation of test strain is recommended in Buffered Sodium chloride-Peptone solution pH 7.0 at 30-35°C wherein there is no multiplication of organisms or there is no decrease in count for upto 4 hours. Refer to appropriate references for standard test procedure

Results

Refer to appropriate references and standard test procedures for interpretation of results.

Storage

Store the sealed bottle containing the dehydrated medium at 10 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light.

Expiration

Refer to the expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if the appearance has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

Limitations of the Procedure

1. Buffered Sodium Chloride-Peptone Solution pH 7.0 is not a culture medium. The minimal nutrient content does not allow significant growth of more fastidious microorganisms. Instead, transfer aliquots of the processed solutions or the inoculated filter membranes to suitable culture media.
2. For identification, organisms must be in pure culture. Morphological, biochemical and/or serological tests should be performed for final identification.
3. Consult appropriate texts for detailed information and recommended procedures.

Packaging

Product Name : Buffered Sodium Chloride-Peptone Solution pH 7.0

Product Code : DM1041I

Available Pack sizes : 100gm / 500gm
